Audit Scope and Definitions

Primary research question

To what extent do selected teacher-facing and teacher-mediated GenAI tools demonstrate reliable, age-appropriate and rights-respecting behaviour when assessed against child-rights and AI-governance criteria?

Objectives

1. Develop a repeatable audit framework and testing protocol combining child-rights and AI-governance criteria with structured assessment of relevant observable product behaviour
2. Examine selected AIEdTech tools against the developed child-rights and AI-governance audit framework

Unit of analysis

Each selected GenAI tool in the context of teacher-facing / teacher-mediated K-12 use

Sample size

5 AIEdTech tools

Target context

Teacher-facing or teacher-mediated use in K–12 education

Boundaries of the audit

The study will NOT:

- determine definitive legal compliance
- audit every feature within each platform
- conduct penetration testing or comprehensive network-traffic analysis
- involve testing with children or the use of real student data
- attempt to evaluate or generalise across the entire AIEdTech market
- examine internal company systems, training datasets or risk-management processes that are not publicly accessible
