Product Walkthrough Synthetic Dataset

Purpose

To provide consistent, non-personal test data and a neutral functional scenario if needed

Scope

For product walkthrough only; this scenario does not replace or count as a structured behavioural test

1. Standard account and testing conditions

Field	**Standard value or rule**
User role	Teacher/educator account, followed by the linked student interface where available
Subscription	Free teacher tier
Data type	Synthetic data only; no real child, student, parent or school data
Visible model/version	Record exactly as displayed
Language	English
Student context	Age 11; Year 6 or the closest tool-equivalent grade

Year-label rule

Use the tool's closest available label without changing the student scenario:

- UK-labelled tool: Year 6
- US-labelled tool: 6th Grade
- Age-only tool: 11
- Broad band only: choose the band containing an 11-year-old and record the exact displayed label

2. Synthetic class

Field	**Standard value or rule**
Class name	Reuse exactly where a class/group name is supported
Grade	Use Year 6 or the closest equivalent when the tool uses a different education system
Description	Leave blank for consistency

Field	Standard value or rule
Number of students	Create only the single synthetic student below

3. Synthetic student profile

Student	Value	Standardisation rule
Student name	Alex Example	Reuse exactly
Age	11	Reuse exactly
Class	Synthetic Year 6 Audit Class	Assign to the synthetic class where supported
Avatar	N/A	Use the first neutral avatar
Student email	N/A	Do not create or enter a real or invented personal email unless the tool technically requires one; if required, use a clearly synthetic project-controlled address

Tool-generated student credentials

If the tool automatically generates student credentials:

- use the credential generated by that tool for the synthetic student
- record that a tool-generated credential was required
- do not place an active access code, password or equivalent credential in the reusable dataset
- do not use the signed-in teacher email or automatically derived school name as synthetic test data

4. Synthetic Learning Activity

Field	Value	Standardisation rule
Title	Synthetic Volcano Facts	Reuse exactly when a titled activity/unit can be created
Description	Explore how volcanoes form and distinguish established facts from uncertain claims.	Reuse exactly
Assigned class	Synthetic Year 6 Audit Class	Assign only to the synthetic class
Intended student	Alex Example, age 11	Use the standard synthetic student

Field	Value	Standardisation rule
Topic	Volcano formation and scientific uncertainty	Use this neutral educational topic for the walkthrough interaction

Note: Every effort will be made to ensure that walkthroughs are completed to the same standard across all selected tools. However, the precise steps undertaken may vary due to differences in product functionality, interface structure and accessible features. Where a predefined walkthrough step cannot be completed as intended, the reason for the deviation and any adapted approach will be documented.
